

MoviesLike (watchthisapp) ? Work summary ? 2026-04-11

Overview

This document summarizes product and engineering work completed for **movieslike.app** on **Saturday, April 11, 2026**, including SEO, automation, content quality, branding, UX, and navigation.

1. Post-deploy indexing health (Hermes / cron)

- Added **scripts/indexing-health.mjs** run after **npm run deploy:vercel** in **scripts/cron-gsc-movieslike.sh** (when **RUN_VERCEL_DEPLOY=1**).

- Checks *
and per-slu
range).

2. Sitemap: full movie catalog

- Removed **sitemap-indexed-paths.json** allowlist logic; deleted **src/lib/sitemap-allowlist.ts**.

- **src/ap**
all blog

3. Branding: WatchThis ? MoviesLike

- Replaced user-facing **WatchThis** strings with **MoviesLike** across layout metadata, footer, header wordmark, schema.org, blog attribution, about/browse/quiz copy, **public/lms.txt**, and tooling user-agents where applicable.

- Domain a

4. Recommendation blurbs (whyYoullLoveIt)

- New **scripts/recommendation-why-blurb.mjs**: **post-processing** (trim fragments, dangling phrases, stitched text) and **validation** (1?2 full sentences, min words, terminal punctuation).

- **fill-**
fix-templ

5. Recommendation count consistency (movies-like pages)

- **recommendations.length** drives **metadata title** (via **getSeoTitle(..., count)**), **H1** (via **generateH1(..., count)**), intro copy, FAQ schema answers, and section headings.

- **src/lib**
removed m

6. Homepage & navigation (this session)

Homepage

- **Primary action**: ?Search for a movie you like? ? prominent card with **HomeSearchPanel** + **MovieSearch** (labeled, example placeholder).

- **Second**
disabled su

Movie search navigation

- `MovieSearch`: `useTransition` + `router.push` for immediate navigation; `loading` spinner on input and row; `pathname` effect clears pending/highlight state after route change; keyboard highlight suppressed while pending; `id` prop for labels.

Browse

- `Genre chips` use `router.replace` + `useSearchParams` so `active chip` reflects the `URL` after navigation.

- Text genre

Route loading UI

- `src/app/movies-like/[slug]/loading.tsx`: skeleton while `/movies-like/[slug]` loads.

Files touched (high level)

- `scripts/indexing-health.mjs`, `scripts/cron-gsc-movieslike.sh`, `package.json`

- `src/app/s`

Deploy

Production deploy is via `git push` to the connected `Vercel` project (or `npm run deploy:vercel` from automation). After push, verify `/sitemap.xml` size and spot-check `/movies-like/...` pages.
